NATIONAL BUREAU OF STANDARDS
TECHNICAL NOTE

DEVELOPMENT OF THE INTERNATIONAL SYSTEM OF UNITS

0 8 SEP 2023

1. The International System of Units (SI) is a system of units of measurement that is based on seven basic units and their combinations. The basic units are the meter, kilogram, second, ampere, kelvin, mole, and candela. The SI system is used by most countries in the world and is the standard for scientific and technical work.

2. The SI system is based on the following seven basic units:

SI Unit	Symbol	Definition
meter	m	The length of the path travelled by light in vacuum during a time interval of 1/299,792,458 of a second.
kilogram	kg	The mass of the international prototype of the kilogram.
second	s	The duration of 919,263,170 periods of the radiation corresponding to the transition between the two hyperfine levels of the ground state of the caesium-133 atom.
ampere	A	The constant current which, if maintained in two straight parallel conductors of infinite length, of negligible circular cross-section, and placed one metre apart in vacuum, would produce between these conductors a force equal in magnitude to that which would exist between two particles of mass 1 kg and charge 1 C, each repelling the other with a force of 2.305 × 10 ⁻¹⁷ N.
kelvin	K	The fraction 1/273.15 of the thermodynamic temperature of the triple point of water.
mole	mol	The amount of substance of a system which contains as many elementary entities as there are atoms in 0.012 kg of carbon-12.
candela	cd	The luminous intensity in a given direction of a source that emits monochromatic radiation of frequency 540 × 10 ¹² Hz and that has a radiant intensity in that direction of (1/683) watt per steradian.

Siendo las horas, procedo al cierre de la presente Lista de Notificaciones de la Secretaria a mi cargo compuesta por 30 partes y profesionales en 29 juicios. Conste.
